Founded in 1969, **Aquafil** is one of the main players, in Italy and worldwide, in the production of Polyamide 6 (nylon 6). The Aquafil Group operates in eight countries of three different continents, with over 2,700 employees at the 16 production plants located in Italy, Germany, Scotland, Slovenia, Croatia, Unites States, Thailand and China. For further details: [www.aquafil.com](http://www.aquafil.com)

Aquafil is a pioneer in the circular economy also thanks to the ECONYL® regeneration system, an innovative and sustainable process able to create new products from waste and give life to an endless cycle. The Nylon waste is collected in locations all over the world and includes industrial waste but also products (such as fishing nets and rugs) that have reached the end of their useful life. Such waste is processed so as to obtain a raw material (caprolactam) with the same chemical and performance characteristics as those from fossil sources. The polymers produced from ECONYL® caprolactam are distributed to the Group's production plants, where they are transformed into BCF yarn and NTF yarn.
